

Session 2

Epic, Stories, Task and Bugs

Purwadhika

Jira Backlog

- **Product Backlog** : Requirements taken from customer needs. Describes what will be done with the application.
- **Sprint Backlog** : The features developed from the product backlog become tasks for the team to work on.

Epic

Epic is a global story about a feature. Describe what the user wants and later can be broken down into multiple specific stories or tasks.

Stories

Story that describes the system of application requirements and is described in a sentence that uses non-technical language.

User Story Syntax

```
As a <user> = who  
I want to <be able to do ABC> = what  
So that <XYZ can be done> = why
```

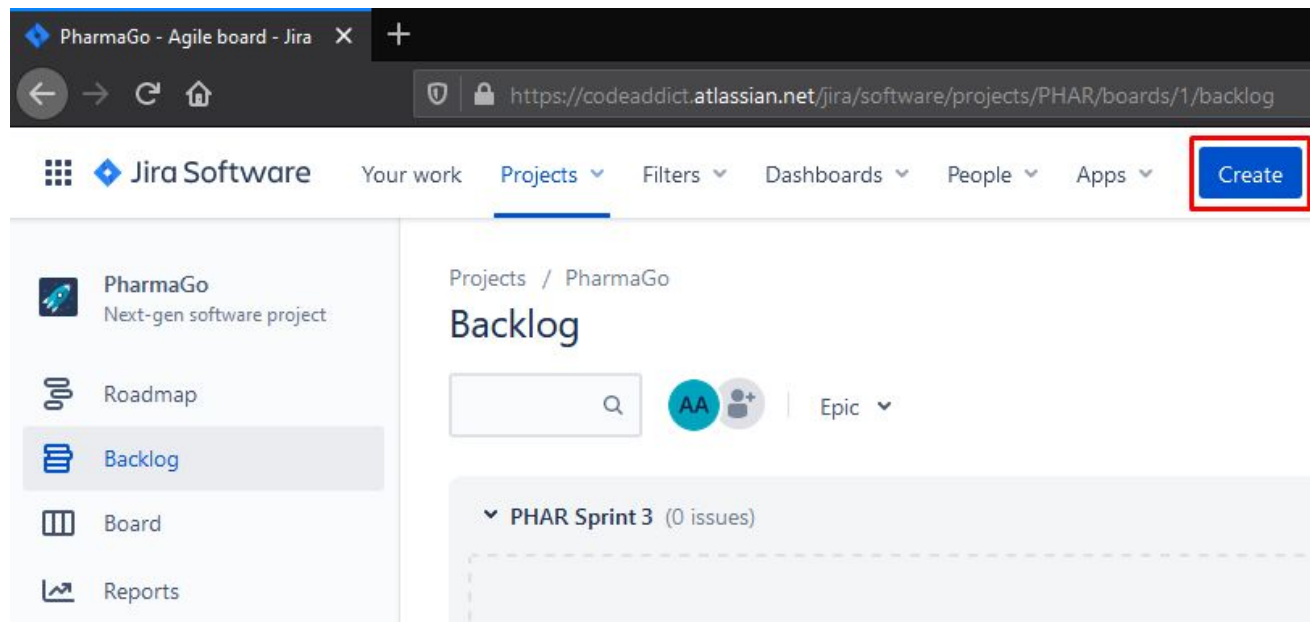

Task

Tasks represent work that is being done technically such as designing diagrams, creating functions or testing features. Tasks can be created by anyone and shared or assigned to specific members.

Bug

The same bug is the task which shows technical work. The difference between the two is the Bug to indicate a problem or error task that must be fixed immediately.

Create Epic from a New Issue
